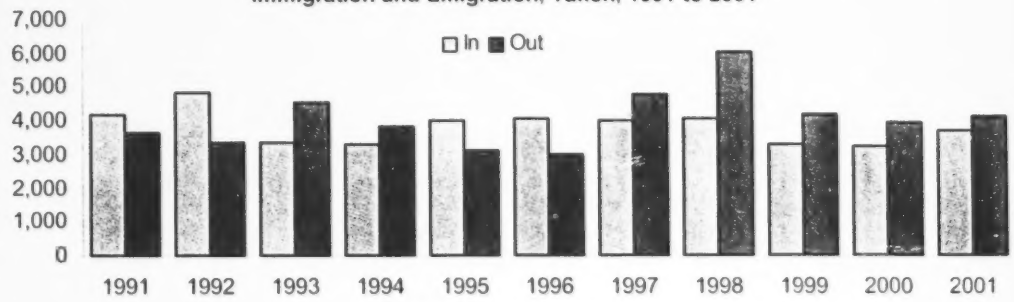
BUREAU OF STATISTICS

Highlights

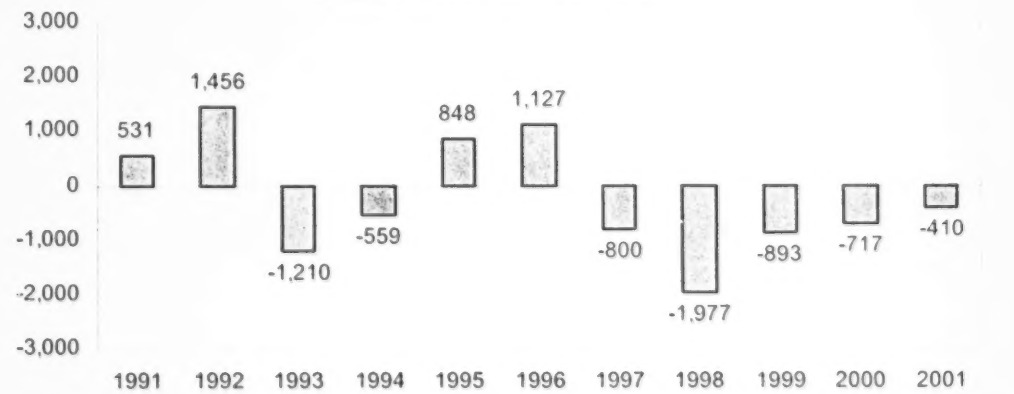
This report examines migration patterns in the Yukon and is divided into three sections. The first section looks at immigration and emigration for the Yukon from 1991 to 2001. It examines both quarterly and yearly migration patterns by gender and age. The second section looks at the median length of residency in the Yukon for out-migrants (those who have moved out of the Yukon during the year) and non-migrants (those who remained resident in the Yukon during the year) by gender, age and ethnicity from 1996 to 2001. The third section compares continuous length of residency in the Yukon in 2001 with 1996, also by gender, age and ethnicity. All of the migration numbers used in this report are based statistically on the Yukon Bureau of Statistics' population data (which are based on the Yukon Health Care registration file).

Immigration and Emigration, Yukon, 1991 to 2001



In the last four years, more people have moved out of the territory than have moved into the territory. In 2001, 4,099 people emigrated from the Yukon, while 3,689 people immigrated to the Yukon.

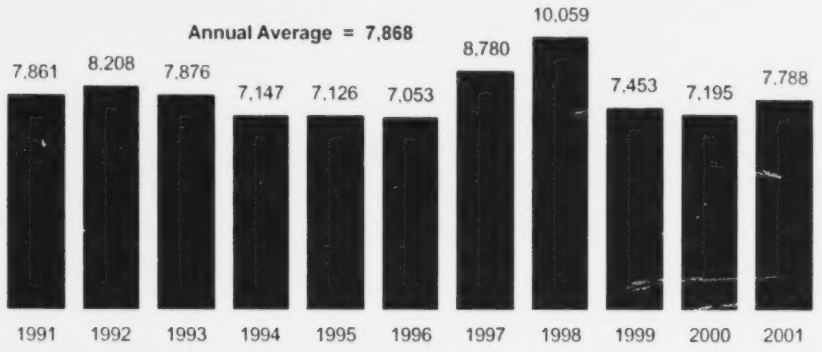
Net Migration, Yukon, 1991 to 2001



Net migration is the difference between the number of people entering the Yukon (immigration) and the number of people leaving the Yukon (emigration). From 1991 to 2001, average annual net migration for the Yukon was -237. Since 1991, the Yukon has experienced two periods of population growth and two periods of population decline. The largest increase in the Yukon population occurred in 1992 when net migration equalled 1,456, and the largest decrease was in 1998 when net migration was -1,977.

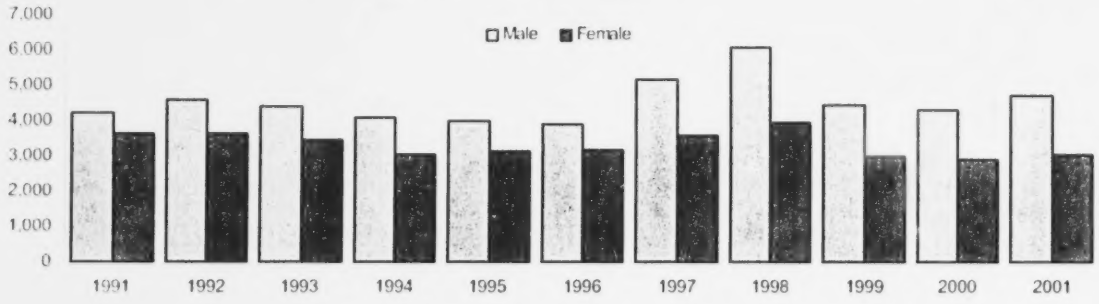
Yearly Turnover

Turnover (Immigration plus Emigration), Yukon, 1991 to 2001



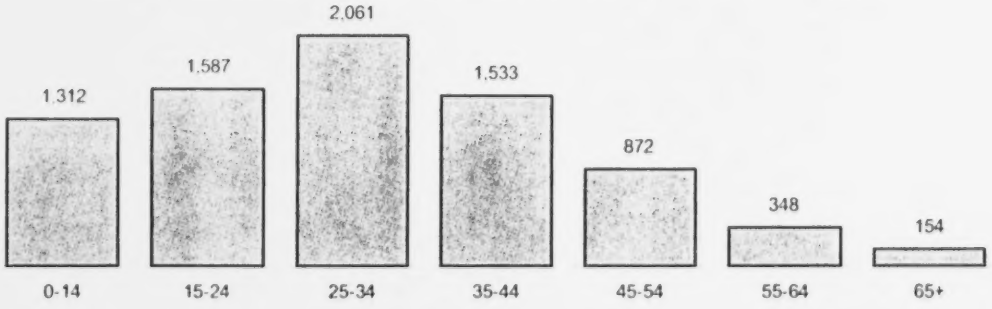
From 1991 to 2001, the average annual turnover (immigration plus emigration) for the Yukon was 7,868. Turnover shows the segment of the population that is mobile and affects things such as the housing market, rental prices and vacancy rates.

Turnover (Immigration plus Emigration) by Sex, Yukon, 1991 to 2001



Since 1991, more men than women moved into or out of the territory, indicating that in the Yukon men are more mobile than women. From 1991 to 2001, the average annual turnover was 4,549 for men and 3,319 for women.

Average Turnover (Immigration plus Emigration) by Age, Yukon, 1991 to 2001

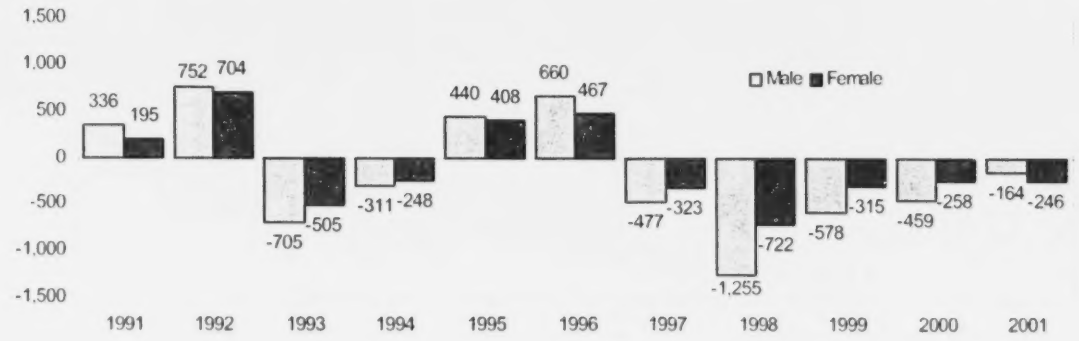


People in younger age groups are also more mobile. Average annual turnover from 1991 to 2001 shows that fewer people in age groups 45 - 54, 55 - 64 and 65+ are moving into or out of the territory. The age group with the highest average annual turnover was the 25 - 34 year old age group (2,061).

Migration by Sex

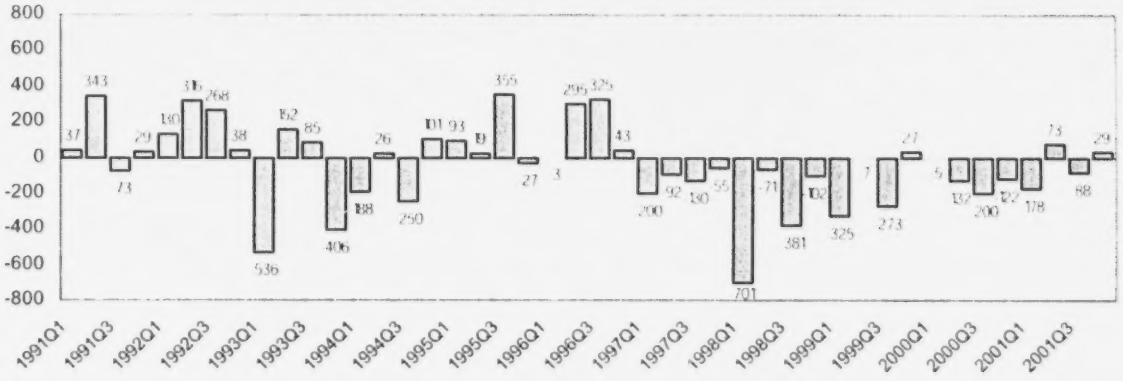
103-01312/

Net Migration by Sex, Yukon, 1991 to 2001



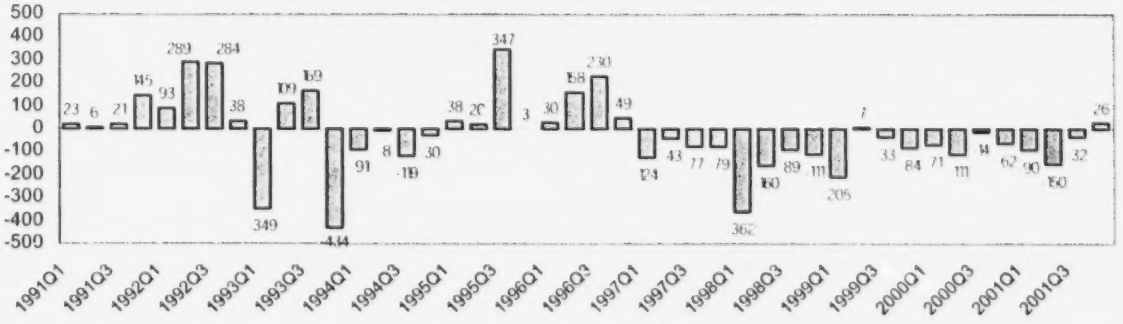
The pattern of net migration is similar for males and females, although males are more mobile, exceeding females in migration in each year except 2001. From 1991 to 2001, average annual net migration was -160 for males and -77 for females. Since 1997, net migration has been negative for both males and females.

Net Migration, Males, Yukon, 1991 to 2001



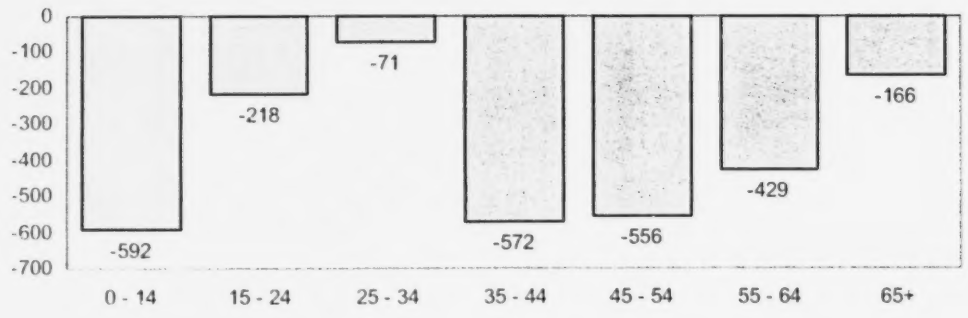
Net migration patterns by quarter are also similar for males and females, although in some quarters net migration for females exceeded net migration for males. From 1991 to 2001, average quarterly net migration was -40 for males and -19 for females.

Net Migration, Females, Yukon, 1991 to 2001



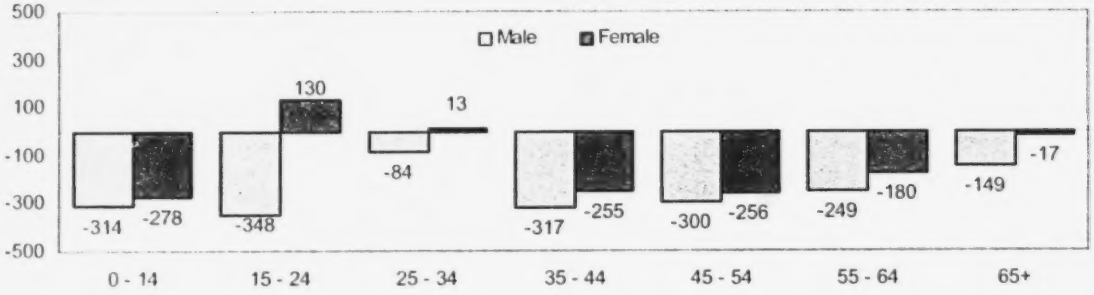
Migration by Age

Total Net Migration by Age, Yukon, 1991 to 2001



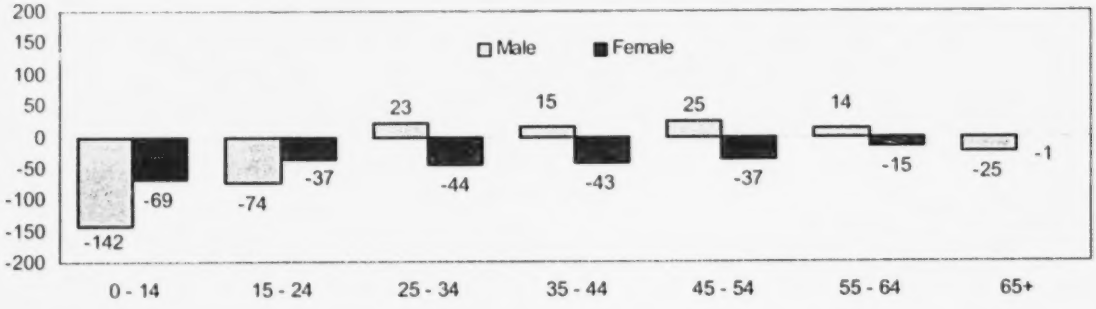
Net migration by age group shows that all age groups decreased between 1991 and 2001. From 1991 to 2001, the age group with the largest decrease in population was the 35 - 44 year old age group (-572).

Total Net Migration by Age and Sex, Yukon, 1991 to 2001



The pattern of net migration by age is similar for males and females with the exception of the 15 - 24 and 25 - 34 year old age groups. The female population in those age groups increased between 1991 and 2001. All other male and female age groups decreased during this time period.

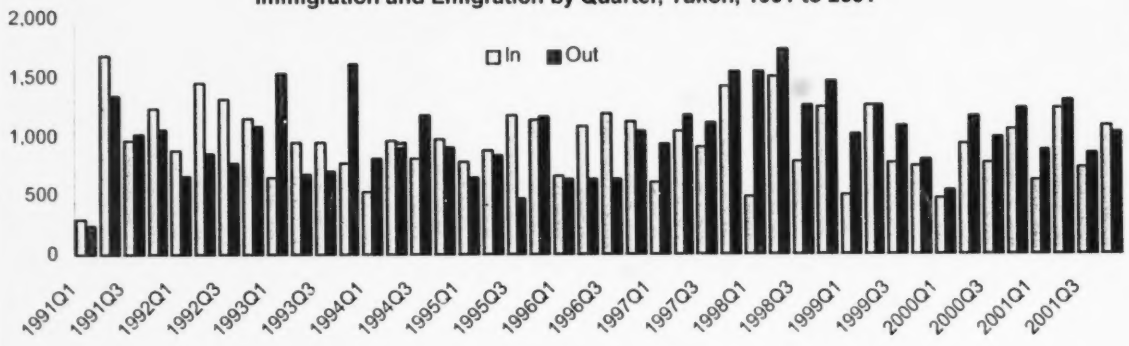
Total Net Migration by Age and Sex, Yukon, 2001



In 2001, net migration by age was negative in most age groups. Males in the Yukon increased in all age groups between 25-to-64. Female net migration decreased in all age groups.

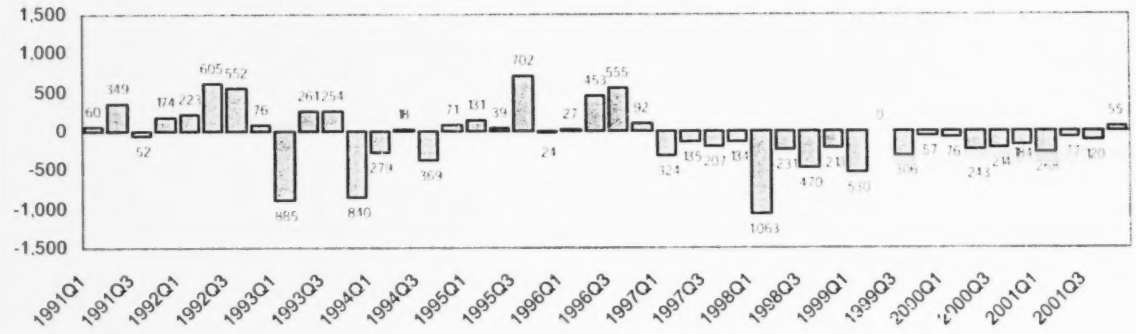
Migration by Quarter

Immigration and Emigration by Quarter, Yukon, 1991 to 2001



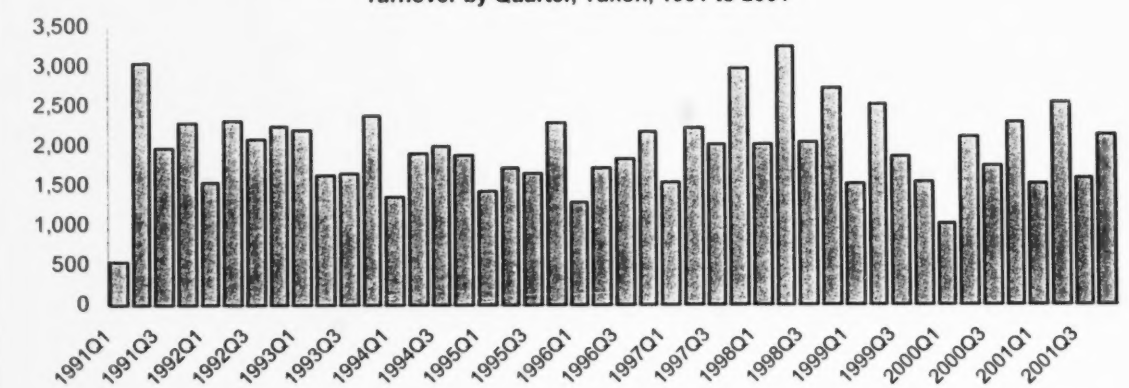
With the exception of the fourth quarter, 2001, since the first quarter of 1997, more people have moved out of the Territory in each quarter than have moved into the Territory. From 1991 to 2001, average quarterly immigration for the Yukon was 954 and average quarterly emigration was 1,013.

Net Migration by Quarter, Yukon, 1991 to 2001



Since 1991, net migration has been positive in 19 quarters and negative or zero in 25 quarters. From 1991 to 2001, average quarterly net migration for the Yukon was -59. Net migration reached a high of 702 in the third quarter of 1995, and a low of -1,063 in the first quarter of 1998.

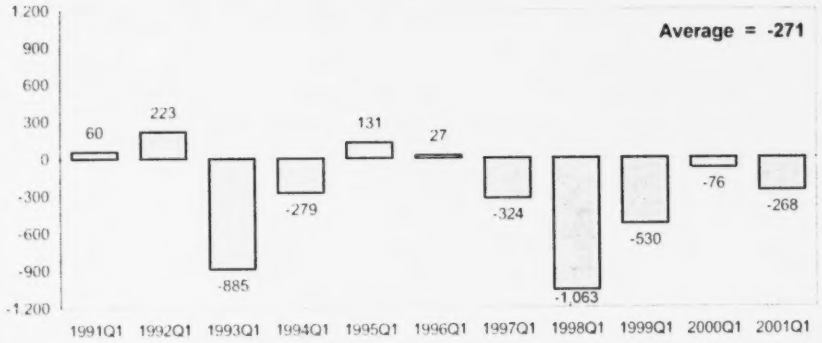
Turnover by Quarter, Yukon, 1991 to 2001



From 1991 to 2001, the average turnover in each quarter was 1,967. Turnover reached a high of 3,255 in the second quarter of 1998 and a low of 550 in the first quarter of 1991.

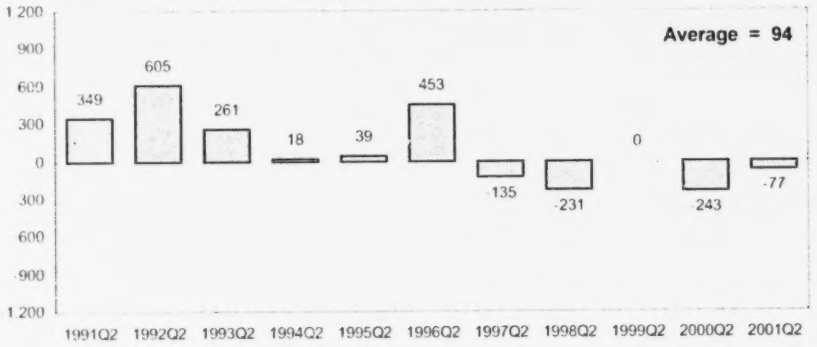
Migration by Quarter

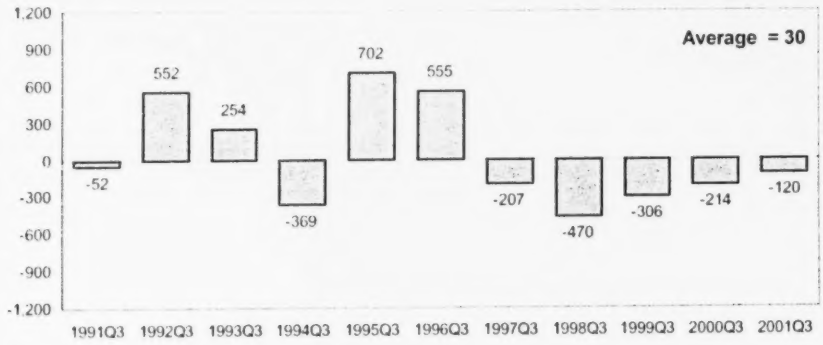
Net Migration by Quarter, Yukon, 1991 to 2001



From 1991 to 2001, average net migration in the first quarter was -271. On average, fewer people immigrated to the Yukon during the first quarter when compared with other quarters.

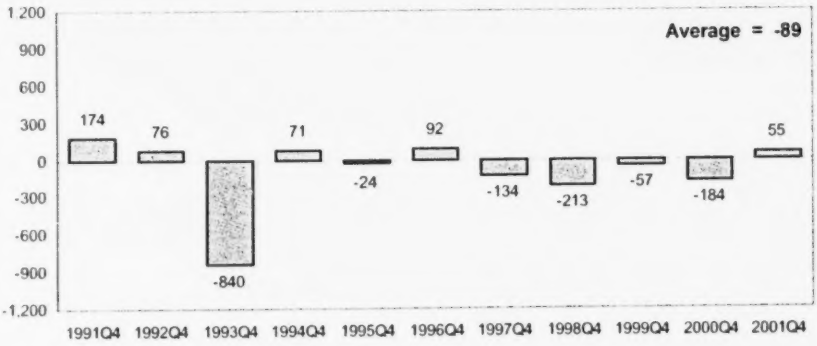
From 1991 to 2001, average net migration in the second quarter was 94. On average, more people immigrated to the Yukon during the second quarter when compared with other quarters.





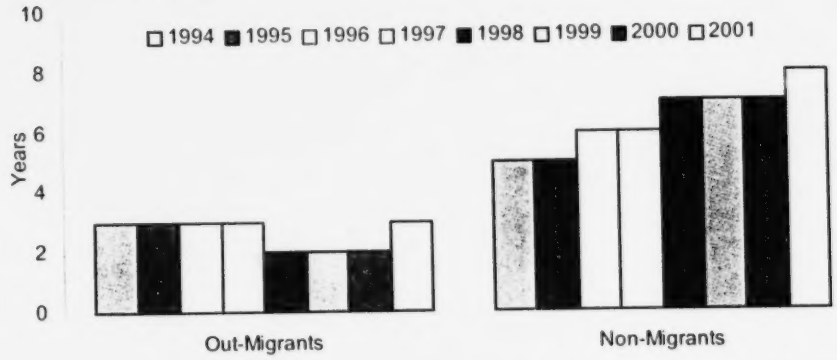
From 1991 to 2001, average net migration in the third quarter was 30. On average, turnover in the third quarter was higher than the first quarter, but lower than the second and fourth quarters.

From 1991 to 2001, average net migration in the fourth quarter was -89. On average, turnover in the fourth quarter was second highest , the second quarter being the highest.



Median Length of Residency

Median Length of Residency (Years), Yukon, 1994 to 2001

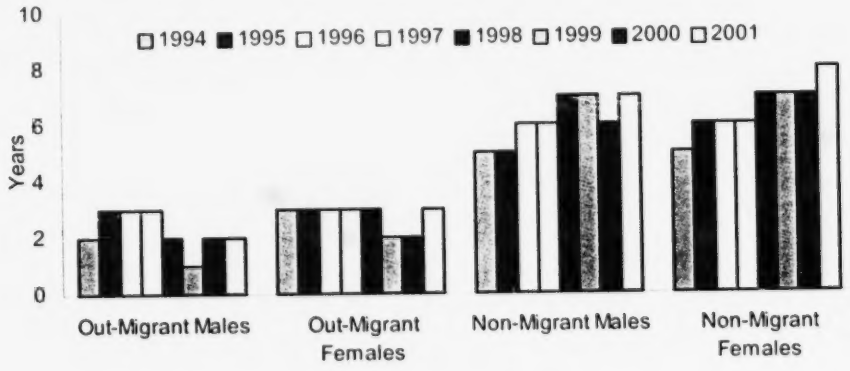


In 2001, the median length of residency for out-migrants (those who moved out of the Yukon during the year) was three years. This was an increase from the three previous years, when the median length of residency was two years.

In 2001, the median length of residency for non-migrants (those who remained resident in the Yukon during the year) was eight years. The median length of residency for non-migrants has increased steadily since 1994.

This indicates that the out-migrant population has become slightly less mobile than it was in the years 1998 through 2000 and the non-migrant population has become less mobile since 1994.

Median Length of Residency (Years), by Sex, Yukon, 1994 to 2001

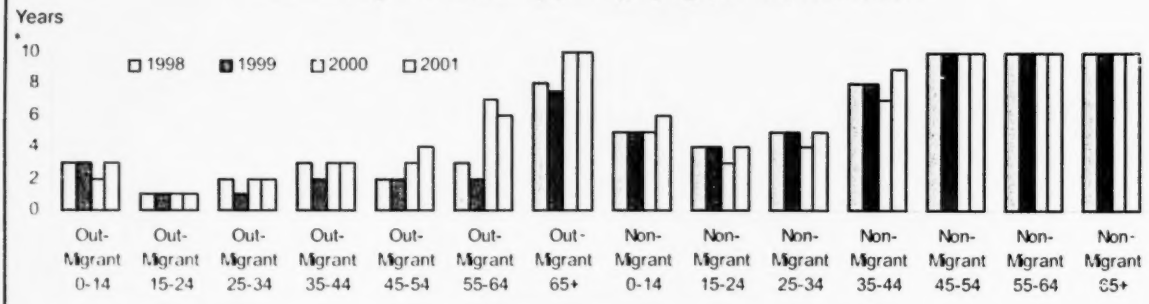


From 1994 to 2001, the median length of residency for out-migrant males and out-migrant females showed that males were slightly more mobile than females. In 2001, the median length of residency for out-migrant males was two years, with three years for females.

Non-migrant males and non-migrant females also have similar migration patterns, although in 2001 non-migrant males were slightly more mobile than non-migrant females.

Median Length of Residency

Median Length of Residency (Years), by Age, Yukon, 1998 to 2001

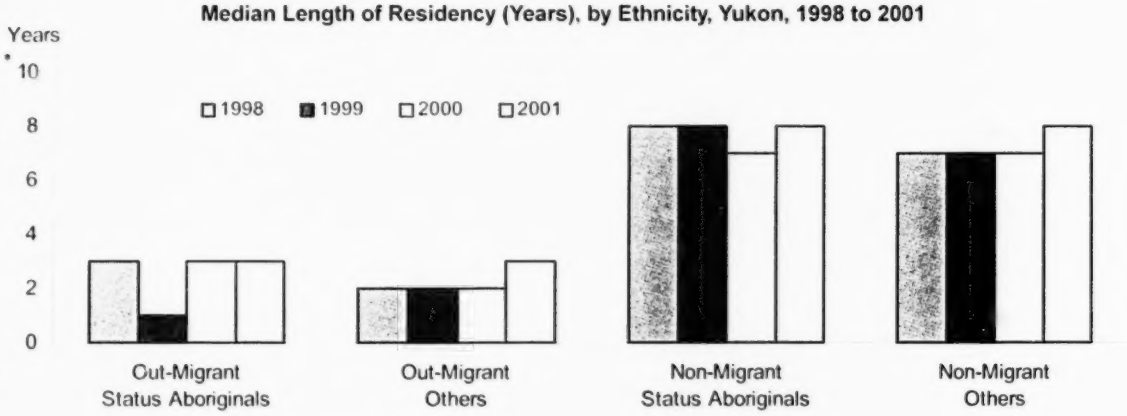


* Refers to median length of residency as 10 or more years. Data after ten years is limited by the Yukon Health Care Registration file, which dates back to 1984

The median length of residency for out-migrants and non-migrants increases with age (with the exception of the 15 - 24 year old age group). People in younger age groups are more mobile than people in older age groups. In each age group, out-migrants are more mobile than non-migrants. From 1998 to 2001, the median length of residency for non-migrants over 55 years of age was 10 or more years.

From 2000 to 2001, the median length of residency for out-migrants remained the same or increased in all age groups except the 55 - 64 age group. This indicates that the out-migrant population became less mobile.

Median Length of Residency (Years), by Ethnicity, Yukon, 1998 to 2001

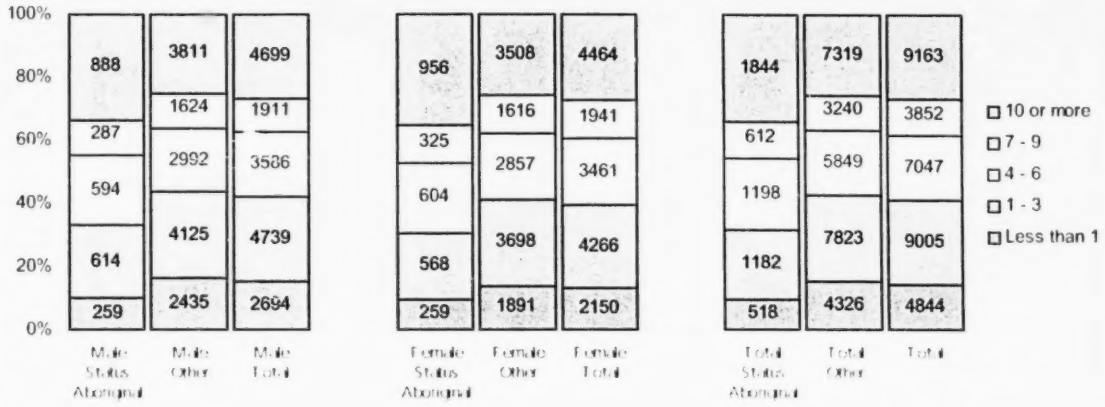


From 1998 to 2001, on average, the median length of residency for aboriginal out-migrants and other out-migrants showed that aboriginals were less mobile than other out-migrants. In 2001, the median length of residency for aboriginal out-migrants was three years, which was the same as for other out-migrants.

The migration patterns for non-migrant aboriginals and other non-migrants are similar to the patterns of the out-migrant population. In 2001, the median length of residency for non-migrant aboriginals was eight years, which was also the same for other non-migrants.

Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 1996

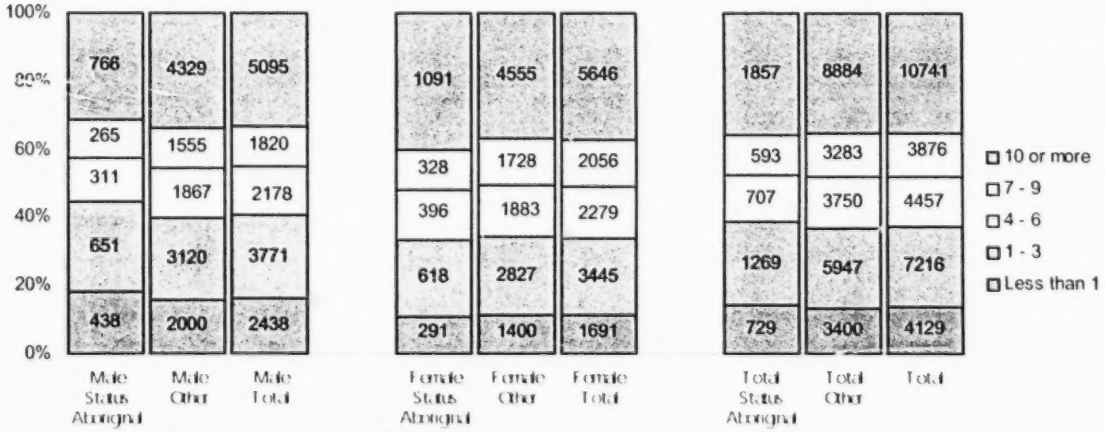


In 2001, there were fewer people whose continuous length of residency in the Yukon ranged from less than one year up to six years when compared with 1996. This may be due to a combination of factors: people in those residency groups emigrated from the Yukon between 1996 and 2001 or their length of continuous residency increased, especially those in the four - six year group, which may now be part of the seven - nine year group.

The largest increase in any residency group was in the 10 years or more group which increased by 1,578 people, or 17.2%, from 1996 to 2001. The largest decrease in any residency group was in the 4 - 6 year group, which decreased by 2,590 people, or 36.8%, from 1996 to 2001. From 1996 to 2001, there was a decrease in the number of people whose continuous length of residency was less than one year, indicating that fewer people are immigrating to the Yukon.

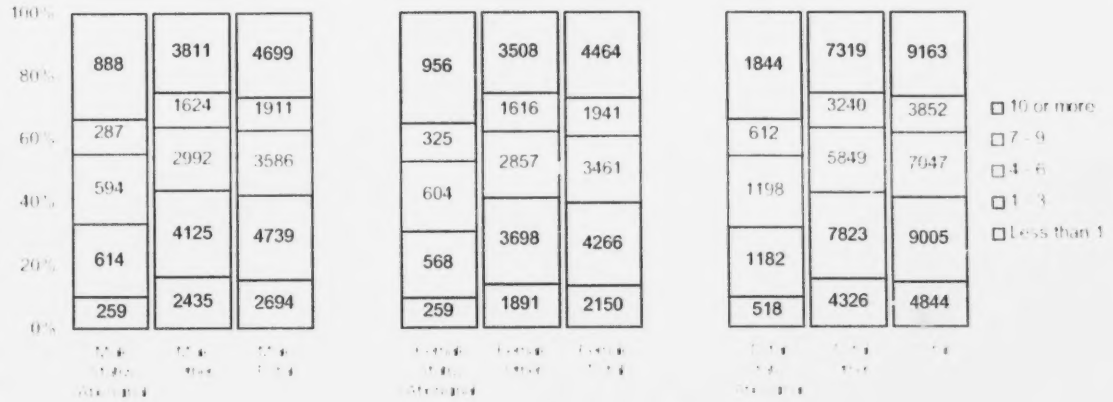
There is a slightly larger percentage of status aboriginals in residency group 10 or more years when compared with other residents. This indicates that status aboriginals are slightly less mobile than other residents. There also is a larger percentage of females in residency groups seven to nine years and 10 or more years when compared with other residents. This indicates that females are slightly less mobile than males.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2001



Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 1996

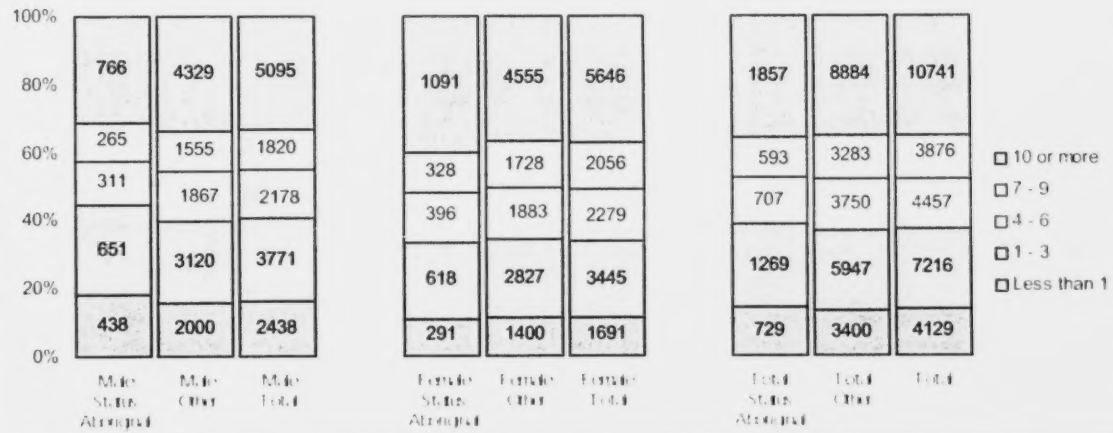


In 2001, there were fewer people whose continuous length of residency in the Yukon ranged from less than one year up to six years when compared with 1996. This may be due to a combination of factors: people in those residency groups emigrated from the Yukon between 1996 and 2001 or their length of continuous residency increased, especially those in the four - six year group, which may now be part of the seven - nine year group.

The largest increase in any residency group was in the 10 years or more group which increased by 1,578 people, or 17.2%, from 1996 to 2001. The largest decrease in any residency group was in the 4 - 6 year group, which decreased by 2,590 people, or 36.8%, from 1996 to 2001. From 1996 to 2001, there was a decrease in the number of people whose continuous length of residency was less than one year, indicating that fewer people are immigrating to the Yukon.

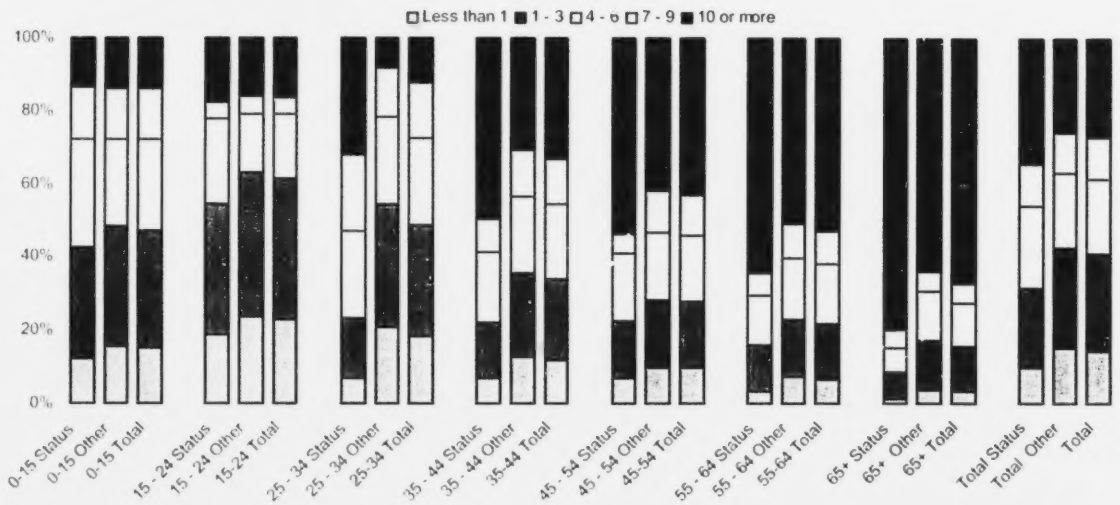
There is a slightly larger percentage of status aboriginals in residency group 10 or more years when compared with other residents. This indicates that status aboriginals are slightly less mobile than other residents. There also is a larger percentage of females in residency groups seven to nine years and 10 or more years when compared with other residents. This indicates that females are slightly less mobile than males.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2001



Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 1996



The length of continuous residency for status aboriginals and other residents increases with age. People in younger age groups are more mobile than people in older age groups. In 2001, over 50% of residents older than 55 were continuous residents in the Yukon for 10 years or more.

The most mobile age group in the Yukon is the 25 - 34 year old group. This group has the lowest percentage of people who have lived in the Yukon continuously for 10 or more years. The 25 - 34 year old age group also has a high percentage of people who have lived in the Yukon for less than one year. Status aboriginals are less mobile than other residents in the 25 - 34 year old age group.

From 1996 to 2001, the number of people that have lived in the Yukon continuously for 10 or more years increased in each age group, with the exception of the 25 - 34 and 35 - 44 year old groups.

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 2001

Notes '10' refers to median length of residency as ten or more years. Data after ten years is limited by the Yukon Health Care Registration file, which dates back to 1984.

This data was generated by comparing January 1st populations in successive years. Anyone who is in both datasets is considered a non-migrant. Anyone who moved out and moved back in within a single calendar year is counted as a non-migrant. Those who were in the population dataset on January 1st of a given year and not in the dataset on the following January 1st are counted as out-migrants.
